

William Hackett Chains Ltd

Ranger Flexible Tine Grass Harrow

Our range of Ranger harrows are designed to cover all applications from large farms to small holdings.

Trailed Harrows are manufactured from 5/8 diameter high carbon steel which ensures that the harrow is extremely strong with high resistance to wear.

Trailed Harrows are available in widths of 4'-0" and 6'-0" sections only, but by using both sizes of section it is possible to make up a maximum width of 18'-0".

Sections can be supplied either with or without the drawbar attachment.

Grass Harrows have shown over the last century how versatile they are in the farming industry which is why there is still a large market place for this type of equipment.

Reasons for harrowing include: -

- Pasture renovation; breaking up and levelling heavy soil.
- Root aeration; for better water infiltration and growth.
- Works in fertiliser to both spread and maximize effectiveness.
- Surface levelling in equestrian centres, race tracks, and running tracks.
- Environmentally friendly grass care.
- Stimulates growth by aerating and loosening thatch.
- Excellent for ripping out moss, spreading manure, and levelling mole holes.

The robust design of the tines embodies strength throughout.
